Starting Six

Write 120 as a product of prime factors

Work out $1\frac{2}{5}$ x $1\frac{2}{7}$

Find the nth term of the sequence:

6 , 11 , 16 , 21

Is 135 a term in this sequence? Explain.

Solve: $\frac{8x}{2} = 2x + 8$

Expand and simplify

(2x+1)(x - 3)

Factorise: $4x - 16x^2$

Factorise: $x^2 + 3x - 4$

Score _____ / 6
